

## The Lock-a-Draw and Bow Rest Waiting for Game

The Compound Bow Rest and Holder holds the drawn bow out in front of you while waiting for game, allowing you to keep hands warm. It is ready in an instant to fire with very little movement to alert game. It is the ideal companion to the Lock-a-Draw for hunting and target practice.

The Lock-a-Draw Features:

- Does not alter your bow.
- Comes with its special bow mounted quiver.
- Carries on the quiver
- Attaches to the bow at the quiver mounting block.
- Use with any arrow rest. Does not block the arrow rest threaded hole.
- Weighs only about half a pound.

Compound Bow Rest and Holder :

- Supports the bow and archer's arm.
- Steadies the bow while aiming and firing to improve accuracy.
- Holds the bow in a ready position, reducing movement which spooks game.
- Aims over a wide area.
- Increases hunting success.
- Does not harm the tree.
- Light and easy to carry.

## A Bow Hunting Solution for the Physically Challenged The Lock-a-Draw and Compound Bow Rest and Holder

Allows the elderly, youth and physically challenged to hunt from a tree stand using a high powered bow that they could never draw in the traditional manner. The bow is drawn with both hands to a string catch that holds the bow at full draw until the safety button is depressed and the trigger actuated.

# The Lock-a-Draw

**Lock-a-Draw and Quiver**

The Lock-a-Draw string catch is now cocked by a spring, and the safety is always on. To pull the trigger you have to depress the safety button and actuate the trigger. This is a great safety feature.

**Lock-a-Draw on Quiver**

**Lock-a-Draw in Quiver on Bow**

**Production model is black anodized.**

**Check DNR for hunting legality.**

Draw the bow with both hands from a sitting position or standing with a foot stirrup. Drawing the bow in this manner allows a person to draw a bow of much greater draw weight than they could in a traditional manner. I always draw the bow with an arrow in my hand so I will not forget to nock one before firing. The Lock-a-Draw looks like an arrow when sighting.

## Compound Bow Rest and Holder

The Compound Bow Rest and Holder is the ideal companion to the Lock-a-Draw. Those who cannot draw a high powered bow in the usual manner may also have a hard time holding a drawn bow steady out at the end of an arm. The Bow Rest solves this problem by taking the weight of the bow and the archer's arm so that aiming and firing is effortless. It is invaluable when hunting from a tree stand, but it is also very helpful in target shooting. Set it up on a tree or post for target practice and you will shoot much more accurately with its support and steadying effect. The boom swings to aim widely horizontally, and body movement along with some flexibility of the support system allows vertical aiming. Pictures in the next panel illustrate this.

In an elevated stand vertical aiming while seated is limited, but rising slightly from the seat lets you aim closer. Standing allows even closer aiming as shown in the next picture.

The bow removes from the Rest by simply lifting.

**The Bow Rest is hunting legal.**
